## SUMMARY

---

Third-year Computer Science student at Purdue University focused on building scalable software systems and AI-powered applications. Experienced in full-stack development, APIs, LLM-based tools, and data automation through industry internships and technical projects.

## EDUCATION

---

**Purdue University** – BS in Computer Science Aug 2024 – May 2028

- **Relevant Coursework:** Data Structures & Algorithms, Computer Architecture, Programming in C, Problem Solving & Object-Oriented Programming, Foundations of Computer Science, Linear Algebra, Statistics.
- **Activities:** CS Undergraduate Teaching Assistant (UTA).

## EXPERIENCE

---

**Co-Op** – Regeneron: Data Engineer Intern Jun 2026 – Present

- Automated generation of 31-page Pilot/Toxicology reports and enhanced Reagent Template system in Seeq platform using Python, SPY library, and Seeq SDK, improving data consistency and reducing manual effort across pharmaceutical workflows.
- Resolved critical Biobank automation issues, including queue pause/resume logic, completion status tracking through job status handler updates, and dynamic partition mapping with auto-imports for streamlined environment configuration.

**Internship** – EduVerse: AI Engineer Aug 2025 – Oct 2025

- Built and integrated an AI-driven project classifier into the platform's challenge submission pipeline, enabling automated ZIP-based content categorization (EVALIA/DEBATO), and simulated scoring for recruiter workflows.
- Enhanced AI project data quality across 15+ learning modules by identifying gaps in progression logic, restructuring coding tasks, and improving objective alignment to meet "build-to-learn" standards.

**Internship** – WebBits: Entry-Level Software Developer Jun 2025 – Sept 2025

- Developed and deployed 8+ secure APIs with AWS Lambda, API Gateway, Cognito, and DynamoDB for authentication, onboarding, agreements, and secret key workflows with error handling and OpenAPI documentation.
- Implemented Next.js/Tailwind applications with responsive admin and customer dashboards, and client portals for onboarding, agreements, and signature capture while ensuring design consistency.

**Internship** – Zayan Soft Tech: AI & Python Intern May 2025 – Aug 2025

- Developed a machine learning model in Google Colab to analyze customer behavior patterns, achieving approximately 75% prediction accuracy through data preprocessing and model evaluation.
- Designed and built a cross-platform invoice management desktop application using Electron, Node.js, Express.js, and MongoDB with automated PDF invoice generation, client/payment tracking, and a custom graphical user interface.

## SKILLS

---

**Languages:** Java, Python, C, C++, R, SQL, JavaScript, HTML, CSS.

**Frameworks & Libraries:** React, Tailwind CSS, Framer Motion, Electron, Node.js, Express.js, Streamlit, LangChain, HuggingFace, LlamaIndex, Pandas, JUnit, Pytest, Postman.

**AI/ML:** Natural Language Processing (NLP), Retrieval-Augmented Generation (RAG), Large Language Models (LLMs), Open-Source AI, Document Processing.

**Cloud & Databases:** AWS Lambda, API Gateway, Amazon Cognito, DynamoDB (GSI), MongoDB, Serverless Framework, OpenAPI, Seeq SDK, Time-Series Analysis, MQTT.

## PROJECTS

---

### **Purdue PoliBot**

- Built a Retrieval-Augmented Generation (RAG) chatbot for Purdue academic policies using PDF parsing, embeddings, LangChain, and Cohere LLMs to provide context-aware responses from institutional documents.
- Developed a Streamlit interface enabling natural language queries over complex policy documents while improving accessibility of university resources.
