SUMMARY

Third-year Computer Science student at Purdue University focused on building scalable software systems and AI-powered applications. Experienced in full-stack development, APIs, LLM-based tools, and data automation through industry internships and technical projects.

EDUCATION

Purdue University – BS in Computer Science Aug 2024 – May 2028

- **Relevant Coursework:** Data Structures & Algorithms, Computer Architecture, Programming in C, Problem Solving & Object-Oriented Programming, Foundations of Computer Science, Linear Algebra, Statistics.
- **Activities:** CS Undergraduate Teaching Assistant (UTA).

EXPERIENCE

Co-Op – Regeneron: Data Engineer Intern Jun 2026 – Present

- Automated generation of 76-page Pilot/Toxicology reports in the Seeq Mycroft platform using Python and SPY library, reducing manual compilation time and improving data consistency across pharmaceutical study documentation.
- Enhanced Reagent Template system by implementing data validation logic and standardized formatting with Seeq SDK, improving template reliability and reducing data entry errors for laboratory workflows.

Internship – EduVerse: AI Engineer Aug 2025 – Oct 2025

- Built and integrated an AI-driven project classifier into the platform's challenge submission pipeline, enabling automated ZIP-based content categorization (EVALIA/DEBATO), and simulated scoring for recruiter workflows.
- Enhanced AI project data quality across 15+ learning modules by identifying gaps in progression logic, restructuring coding tasks, and improving objective alignment to meet "build-to-learn" standards.

Internship – WebBits: Entry-Level Software Developer Jun 2025 – Sept 2025

- Developed and deployed 8+ secure APIs with AWS Lambda, API Gateway, Cognito, and DynamoDB for authentication, onboarding, agreements, and secret key workflows with error handling and OpenAPI documentation.
- Implemented Next.js/Tailwind applications with responsive admin and customer dashboards, and client portals for onboarding, agreements, and signature capture while ensuring design consistency.

Internship – Zayan Soft Tech: AI & Python Intern May 2025 – Aug 2025

- Developed a machine learning model in Google Colab to analyze customer behavior patterns, achieving approximately 75% prediction accuracy through data preprocessing and model evaluation.
- Designed and built a cross-platform invoice management desktop application using Electron, Node.js, Express.js, and MongoDB with automated PDF invoice generation, client/payment tracking, and a custom graphical user interface.

SKILLS

Languages: Java, Python, C, C++, R, SQL, JavaScript, HTML, CSS.

Frameworks & Libraries: React, Tailwind CSS, Framer Motion, Electron, Node.js, Express.js, Streamlit, LangChain, HuggingFace, LlamaIndex, Pandas, JUnit, Postman.

AI/ML: Natural Language Processing (NLP), Retrieval-Augmented Generation (RAG), Large Language Models (LLMs), Open-Source AI, Document Processing.

Cloud & Databases: AWS Lambda, API Gateway, Amazon Cognito, DynamoDB (GSI), MongoDB, Serverless Framework, OpenAPI, Seeq SDK, Time-Series Analysis.

PROJECTS

Purdue PoliBot

- Built a Retrieval-Augmented Generation (RAG) chatbot for Purdue academic policies using PDF parsing, embeddings, LangChain, and Cohere LLMs to provide context-aware responses from institutional documents.
- Developed a Streamlit interface enabling natural language queries over complex policy documents while improving accessibility of university resources.

CERTIFICATIONS

Skillsoft – AWS Certified Machine Learning: AI/ML Services	Aug 2025
AT&T – Technology Academy	Jun 2025
Google Cloud – Cybersecurity Certificate	Apr 2025
Bloomberg Forage Job Simulations – Client Service & Engagement	Mar 2025
